Fluoptics joins the delegation of French Minister for Foreign Trade for Japanese visit

Grenoble – Fluoptics, a company specialized in fluorescence image-guided surgery solutions, will join the delegation of medical technology companies that will come to Japan with the French Minister of Foreign Trade, Nicole Bricq, during her visit to Japan, April 2nd to 4th.

“We are very glad to take part into this delegation for commercial prospection organized by Ubifrance for the French company of the medical technology field, and to represent, with other companies, the Rhône-Alpes region, together with the ECCAMI and I-CARE clusters to which we belong”* explained Odile Allard, CEO of Fluoptics.

At this occasion, the very first surgery with Fluobeam® in Japan will be made for an operation of the liver by Dr. Takeaki Ishizawa, from Tokyo University, in the surgical department of the Ariake Hospital Cancer Institute.

« With more than 20 billion Euros, the Japanese market of medical devices ranks second worldwide, just behind the United States. This is an extraordinary opportunity for export for French innovative companies. This visit is our occasion to show our know-how and our innovation skills in flourishing sectors like, for example, minimally invasive surgery and medical imaging”, emphasizes Odile Allard.

Founded in 2009, Fluoptics develops and markets innovative solutions in the field of fluorescence image-guided surgery. This technology has many applications, among others in surgical oncology, for the resection of tumors and metastasis, for sentinel lymph nodes detection, but also in cardiovascular surgery, reconstructive surgery and liver surgery.
