## FLUOPTICS® and INVIVOX sign a medical training partnership for thyroid surgeons

Grenoble, Boston, Bordeaux—FLUOPTICS®, inventor of FLUOBEAM®, the European expert in fluorescence imaging as an aid to surgery, and INVIVOX announce the signature of a partnership contract that will give more visibility to FLUOPTICS® thyroid surgery Masterclasses and facilitate surgeon access.

“Thanks to InvivoX, our live operating room Masterclasses dedicated to thyroid surgery will be more visible, more accessible to more people around the world,” said Odile Allard, CEO and co-founder of FLUOPTICS®.

“It’s entirely in keeping with our global deployment strategy for FLUOBEAM® LX, our new product designed for this type of surgery,” she concluded.

These Masterclasses will enable surgeons to observe thyroid procedures in real time from the operating room. These procedures are performed in several European hospitals, such as the European Hospital of Marseille or the Geneva University Hospital. They make it possible to conveniently discover a new clinical technique that introduces autofluorescence at the start of surgery as a way of protecting the parathyroids, for example in thyroidectomies, thereby limiting post-operative complications and hypocalcemia.

*“Our collaboration with Fluoptics® is further evidence that presential training is the training of choice for physicians to discover—and acquire—new techniques,”* adds Julien Delpech, founder of the InvivoX platform.

### About FLUOPTICS®

With a presence in over 16 countries, Fluoptics® is a European company and inventor of FLUOBEAM®, a recognized expert in developing and selling innovative solutions in fluorescent imaging as an aid to surgery. This technology finds many applications in thyroid surgery and breast reconstructive surgery, oncology (removal of cancerous tumors, detection of sentinel nodes), as well as in cardiovascular and liver surgery. Based in Minatec (Grenoble-France) and in Boston, in the United States. For more information about FLUOBEAM® and FLUOPTICS®, visit [www.fluoptics.com](http://www.fluoptics.com)

### About InvivoX

Created in 2016, French startup InvivoX compiles presential training for healthcare professionals.

Invivox helps facilitate the sharing and transmission of health-related knowledge, democratizing access to leading experts around the world.

To meet the challenges of training and skills management that will be mandatory for all healthcare professionals pursuant to the French *Ma Santé 2022* law, Invivox has also been offering E-learning training modules since June 2019, further consolidating its ambition to become a key global player in medical training.
